

Qingsong LM Technical Report (fictional, for practice only)

Page 1 - Overview and model sizes

Qingsong is an open-source LLM family released by Songguo Lab in March 2025.

It comes in three sizes: Qingsong-3B, Qingsong-14B and Qingsong-72B.

All sizes share one tokenizer with a vocabulary of 150,000 tokens.

The 3B model targets phones and laptops.

Page 2 - Training and context length

Pre-training used about 6 trillion tokens:

45% Chinese, 40% English and 15% code. Data cutoff: October 2024.

Every size supports an 8K context window by default.

Qingsong-14B and Qingsong-72B also ship 32K long-context versions.
